

CoalitionTM

CYBER RISK, SOLVED

XYZ CO.

Cyber Risk Assessment

Coalition's insurance products are offered with the financial security of Swiss Re Corporate Solutions and Argo Pro US (A+/A ratings by A.M. Best).

OVERVIEW

WE'RE A NEW KIND OF INSURANCE

Coalition was purpose-built at the intersection of technology and insurance to help companies manage cyber risk. This risk assessment is the first step in this continuous process. Using externally observable data, this report provides an objective, evidence-based assessment of your cyber risk and overall security preparedness. As your dedicated risk management partner, our security team is available to provide additional context and to help you to implement security and loss controls, all at no additional cost.

XYZ Co.

Current risk level: HIGH

This assessment was created for XYZ Co. (the "insured") by Coalition Insurance Solutions, Inc.. Using externally observable data collected by Coalition's signals intelligence platform, it provides a snapshot of the insured's current risk level, and its relative security posture as compared to all Coalition policyholders. This data, combined with Coalition's proprietary claims and loss data, is used to probabilistically determine the likelihood of a cyber incident, and to provide a relative measure of the insured's defensive security posture as compared to other organizations insured by Coalition.

Critical Alerts (0)

There are no critical security alerts for XYZ Co..

Recommendations (4)

Enable DMARC / E-mail Protection

Configure [DMARC](#) in minutes to prevent phishing attempts and spam. Properly configured DMARC/DKIM records can help ensure that only authorized systems can send email on the behalf of a company. There is no cost to implementing DMARC.

Enable SSL/TLS Encryption

The insured should consider implementing SSL/TLS encryption on its website and forcing all traffic over HTTPS to protect information transmitted through the insured's web application. A free SSL certificate can be acquired from [Let's Encrypt](#), or by using [Cloudflare](#), one of Coalition's included security applications.

Current Ranking

You rank in the 25th percentile of all Coalition policyholders.

Premium discounts are offered to companies that use encryption.

Enable DNSSEC

DNSSEC eliminates the threat of DNS cache poisoning by authenticating all DNS queries with cryptographic signatures. Instead of blindly caching DNS records, DNS servers will reject unauthenticated responses. Combined with secure registrar practices, DNSSEC guarantees that those visiting your domain see your website and not the content on somebody else's web server. You can [learn more about DNSSEC here](#).

Create a security vulnerability disclosure program

Discover critical security vulnerabilities before they can be criminally exploited. Coalition has partnered with HackerOne to provide a free [security vulnerability disclosure program](#) to all Coalition policyholders.

For more information, reference the HackerOne app available within the Coalition policyholder dashboard.

COMPROMISED CREDENTIALS

OVERVIEW

Coalition's signals intelligence platform collects information from past data breaches, hacker forums, and other dark web sources to determine whether an organization's data, including employee login credentials and other sensitive information, have been compromised in third party data breaches.

SIGNIFICANCE

Most computer systems rely on passwords to prevent unauthorized access, and all the cybersecurity in the world won't help you if someone knows or guesses your password. Criminal actors frequently take advantage of the fact that many individuals re-use passwords, and use credentials compromised from prior data breaches in order to target e-mail, banking, and other corporate accounts. So called "credential stuffing" attacks are a leading cause of data breaches.

WHAT YOU CAN DO

Coalition continuously monitors for compromised credentials to in order to provide advanced warning on potential threats to an organization. Upon receiving an alert, the affected user should ensure that they update their passwords for *all* affected services. Read more about [password security](#).

LIST OF COMPROMISED CREDENTIALS

14980 were identified; below are the first 250. The policyholder will have access to the full set of compromised credentials in their Coalition Dashboard.

DETECTED VULNERABILITIES

Severity:

HIGH	MODERATE	LOW
0	1	3

No actively exploitable vulnerabilities discovered.

OVERVIEW

Coalition's signals intelligence platform passively enumerates the devices, technologies, and services used by an organization, and cross-references this information with a proprietary database of software vulnerabilities and versioning information, including comparison against the National Vulnerability Database, a U.S. government repository of standards-based vulnerability management data represented using the Security Content Automation Protocol (SCAP).

SIGNIFICANCE

The use of outdated, vulnerable software is a leading cause of data breaches and cyber incidents. Criminal actors scan the Internet for such software, as we do on behalf of our policyholders, and use this information to target and breach an organization's computer systems. However, just because software is vulnerable does not mean that it poses a significant risk to an organization. Our data suggests that fewer than 2% of vulnerabilities are actively exploited by criminals. Our tracking of criminal exploits allows us to more accurately assess risk, and to work with our policyholders to most effectively remediate security issues.

WHAT YOU CAN DO

Coalition continuously monitors for software vulnerabilities, with particular attention to vulnerabilities with active exploits, as well as software upgrade availability to in order help our insureds get ahead of potential threats to their organization. Upon receiving an alert, Coalition's dedicated security team is available to assist with remediation efforts.

LIST OF TECHNICAL VULNERABILITIES

TECHNOLOGY	VERSION	SEEN ON	VULNERABILITIES	ACTIVE EXPLOITS?
nginx	1.9.9	ec2-52-8-203-224.us-west-1.compute.amazonaws.com 52.8.203.224	CVE-2017-7529 CVE-2016-0747 CVE-2016-0746 CVE-2016-0742	No

PROTECTIVE ACTIONS & CONTROLS

OVERVIEW

In addition to assessing an organization's cyber risk, Coalition also collects and analyzes protective actions and controls implemented by organizations to mitigate such risk. This information is used for the purposes of assessing an organization's ability to detect and mitigate risks, as well as for the purposes of applying insurance premium discounts. Below are several of the positive security measures we detected.

LIST OF POSITIVE SECURITY MEASURES

- HTTPS
- Amazon Route 53
- SPF
- Google Apps for Business

APPENDIX: DOMAINS DETECTED

OVERVIEW

The following domains were detected and enumerated during our underwriting of the insured.

ANALYSIS

The following domains were flagged as potentially unsafe: **xyz.com**. Contact us for further information.

FAQ

WHO IS COALITION?

Coalition is a leading provider of Cyber and Technology Errors & Omissions insurance. We provide comprehensive insurance coverage and free cybersecurity tools to help businesses manage and mitigate cyber risk. Backed by A+/A rated insurers Swiss Re Corporate Solutions and Argo Group, Coalition provides companies with up to \$10M of cyber and technology insurance coverage in all 50 states and the District of Columbia. Coalition's cyber risk management platform provides automated security alerts, threat intelligence, expert guidance, and tools to help businesses remain resilient in the face of cyber attacks. Coalition is headquartered in San Francisco. For more information about Coalition, visit www.thecoalition.com.

HOW DO YOU DETERMINE THE SECURITY RANKING?

Our security ranking provides a relative measure of an organization's risk and security posture as compared to the universe of Coalition policyholders. In order to determine the ranking of an insured, we correlate identified risk conditions with Coalition's proprietary loss and claims data as a provider of insurance to thousands of organizations. Unlike traditional security ratings that make arbitrary assumptions on the relative impact of an identified risk condition to generate a security score, Coalition uses actual loss and claims data to identify the most significant risks to an organization. The result is not only a more accurate assessment of risk, but actionable prescriptions to help an organization invest its resources against the most impactful remediation actions.

WHERE DOES THE UNDERLYING DATA FOR COALITION'S RISK ASSESSMENT COME FROM?

Coalition passively collects external data on an organization's Internet facing IT infrastructure, compromised system events, file sharing events, and configurations from many different sources. Coalition does not perform active collection of information, including penetration testing against an organization's networks, without the explicit permission of that organization.

HOW CAN I LEARN MORE?

To learn more about Coalition, visit www.thecoalition.com, or our knowledge base at help.thecoalition.com. As a dedicated risk management partner to our policyholders, Coalition's team of security and insurance experts are dedicated to helping you implement security and loss controls, all at no additional cost.

Coalition™

CYBER RISK, SOLVED

This report was prepared by:

COALITION, INC.
415 JACKSON ST., STE 200,
SAN FRANCISCO, CA 94111

FOR MORE INFORMATION VISIT
www.thecoalition.com

Coalition's insurance products are offered with the financial security of Swiss Re Corporate Solutions and Argo Pro US (A+/A ratings by A.M. Best).
